Ogle County
G.I.S. Partnership

"Improved Mapping for Informed Decisions"

Oregon, Illinois 61061

2 February 2009

Parcels / Devnet

We are now verifying our parcel information with our DevNet database.
This will help create boundary files for our various districts and municipalities.

Aerial

Kris and Larry will locate the control points for our 2009 aerials. The 2009 flight will be flown in early spring.

Map / Address Booklets

We have updated our Map Booklet for 2009. The Address Booklet has been completed for the County. Municipality addresses are not in the booklet.

Remote Access

Remote data access for the membership is proceeding. The current issue is internet access outside the secure net of the county network. We are looking into different options to solve this issue

ArcGIS Server

Development continues on the remote mapping program. Outside internet access problem is addressed.

Equipment / Software

With the new year's project more computing power is needed. We will be purchasing new computers for the GIS personnel. The current computers will be purchased by another agency thus reducing the cost of the new computers.
A study of contouring software is underway. This will allow the Partnership to generate contours for the entire county.

Larry Callant
GIS Coordinator
