# Ogle County
## G.I.S. Partnership

**"Improved Mapping for Informed Decisions"**

Oregon, Illinois 61061

5 May 2009

**Aerial**

The 2009 Aerials have been flown. Kucera International flew the county on April 15th and 16th. The weather was excellent. The IDOT Lidar flight for Ogle and Lee was flown that week. The Lidar data will allow us to generate 2ft contours of the entire county. New control points were collected and will be delivered to Kucera later this week. The pilot project aerials will be delivered to us in June. The aerial project completion date is Dec 1, 2009.

**Address Booklets**

We have had various requests for our 2009 Ogle County Address Booklets.
Some of these requests were from U.S. Census and Ogle County Sheriff's Office.

**Remote Access / ArcGIS Server**

The remote gis servers have been located at the temporary county building in Mount Morris ( Watt Building). This will give us a backup site plus allow our membership remote access to the partnership information.
The ArcGIS Server will allow our partnership to view, add, or modify information via the web.

**Membership Visits**

We have been and will continue to meet with the members of the partnership. Be believe that one-on-one visits benefit both our members and our GIS staff.

**Equipment / Software**

Our Trimble GEO-XH has been purchased. The equipment will be available to the membership to use. Currently the equipment is being used on two projects: Hillcrest utility location and the Ogle County Fiber Optic.

**Projects**

The Hillcrest utility project is our first GPS location project. Hidden buffalo boxes is the only factor in total completion.
